

Your jet is under the command of an experienced Captain and crew. They have been thoroughly trained in every emergency procedure. Please follow their instructions should an emergency arise. For your added safety and comfort we urge you to note the locations of the exits and safety equipment indicated on this chart.

SMOKING AND SEAT BELTS

Seat belts must be fastened when the seat belt sign is on. You may walk about the cabin freely when the sign is off; however, you will notice most experienced air travelers keep their belts loosely fastened whenever they are seated. We recommend this practice.

You may smoke at any time except in the designated no smoking sections located in the front of each compartment, or when the Captain turns on the "No Smoking" sign.

CIGARETTE LIGHTERS: You are kindly requested not to use cigarette

lighters with clear plastic reservoirs. As these constitute a serious fire hazard at altitude.

ELECTRONIC DEVICES: Federal Aviation regulations prohibit operation of all electronic devices other than portable voice recorders (dictation equipment), hearing aids, heart pacemakers, calculators and electric shavers aboard the airplane in flight. Portable electronic devices other than those specified above may interfere with the navigation or communication systems of the aircraft.

THE BOTTOM SEAT CUSHION IS A FLOTATION DEVICE. LIFE VEST UNDER SEAT ON OVERWATER FLIGHTS.

OXYGEN SYSTEM

PULL DOWN ON MASK

COVER MOUTH
AND NOSE

The jet cabin is pressurized down to an altitude of 5000 to 8000 feet. Should the cabin lose pressure, an oxygen mask will automatically drop out of the overhead storage bin. Pull down on mask covering both your mouth and nose. Breathe normally. Slip the band over your head and adjust to fit. Continue to use the mask until advised to remove it. No smoking allowed when oxygen system is being used.
